Abstract: *The proposed structure contains various disorders, for instance, Atopic Dermatitis, Nail parasite disease, Psoriasis ailment acknowledgments and Ringworm affliction stages conjectures. High speed of passings on account of steady disorders, for instance, Dermatitis, Nail development contamination, Psoriasis disease IDs and Ringworm disease need to cultivate genuine investigation system which serves to trained experts. Some unacceptable examination prompts human passings so we want to oversee definite affirmation of different skin sicknesses. Many works are by and by destroyed various ailments however there isn't any consoling strategy tracked down that gives distinct confirmation for altogether cases. The proposed structure includes different defilements like Dermatitis, Nail improvement hardship, Psoriasis infirmity region and Ringworm infection unmistakable bits of confirmation and stages suspicions. We are attempting to support structure for multi-illness ID and stages suspicions gives early affirmation and saves loads of lives by lessening passing rate by skin issues. In this paper we utilized convolutional brain network for infection distinguishing proof. We get the 94.4% precision on 100 cycles. We are also recommending the hospital by using KNN algorithm.*

Keywords: Multi Disease Detection, Convolutional Neural Network, Neural Network, Deep Learning, KNN, etc.
