Abstract: Organizations began using Electronic Data Interchange (EDI) to move commercial papers back and forth in the 1960s, and E-Commerce was born. Online shopping enterprises arose in the 1990s, and they are now a huge phenomenon. On August 11, 1994, a Sting CD was sold by US retailer Net Market as the first-ever online purchase. It has got so simple and convenient that anyone can purchase for anything from the comfort of their own home with just a few clicks. With the introduction of smartphones, you may now shop from anywhere and at any time using a wireless device connected to the Internet. You may now look for practically any product or service online without having to leave your house. Depending on the function they serve, different eCommerce websites are named or referred to in different ways. E-commerce is simply a sort of business. It operates in a manner that is very similar to that of the actual retail industry. The only difference between it and a traditional store is that the entire transaction takes place online.

Keywords: Ecommerce Website, E-com website, Shopping
