**Abstract:** *Introduction and Objective Ivermectin (IVM) and doxycycline (DOXY) have demonstrated in-vitro activity against SARS- management CoV-2, and have a reasonable safety profile. The objective of this systematic review was to explore the evidence in the literature on the safety and efficacy of their use combination therapy in COVID-19 management. Studied a male covid patient, during treatment maximum amount of drugs were given Ivermectin and Doxycycline for about 15 days . When checked after 10 days the patient was notcured successfully. And some of tablets were still in process .While treatment patient was take Ivermectin and Doxycycline high power drugs due to that side effects and interactions were noticed and treatment was started immediately . And the patient was back to normal condition and cured successfully and is healthy.*

**Keywords:** Ivermectin and Doxycycline
