Abstract: *Nanotechnology refers to the utilization of the unique properties of objects at the nanoscale. Because of the superior quality and intelligent features that nanotechnology provides, it is becoming increasingly popular in several industries. Nanomedicine refers to the application of nanotechnology in the fields of healthcare and medication development. It has been effectively employed in the treatment of various serious ailments, such as cancer and cardiovascular diseases. The present composition provides a comprehensive summary of the latest advancements in nanotechnology, specifically focusing on imaging and drug delivery*

Keywords: Nanotechnology, Pharmaceutical, Imaging, Drug delivery
