Abstract: *The development of the digital world in the era of industrial revolution 4.0 is very significant both in the world of education and the world of industry where it requires adaptation to be able to utilize it so that they remain productive to increase income. Women's often superior social skills represent a comparative advantage in the digital age, and this is particularly so when social skills are complemented with higher education and advanced digital literacy. However, the same barriers and deficits that obstruct women's current advancement in many G20 countries may deprive them from many beneficial opportunities in the digital age. Major efforts by G20 governments are required to invalidate these barriers.*

Keywords: Digital, Women, Education, Social skills, G20
