**Abstract:** *In the present scenario, women are keeping pace with men in every walk of life but unfortunately at cost of being subjected to abuse, harassment, and violence in public and even at their own houses. They cannot step out of their houses at any time of the day, cannot wear clothes as per their will, nor can they even go to work in peace. To provide security to the women from strangers in any situation. In this system user needs to feed three contact numbers, in case of an emergency on moving the phone up and down thrice, the system sends SMS and calls to one of the numbers fed into the system with the location. The Android SDK gives the instruments and APIs used to create applications on the Android stage utilizing the java programming language. Ladies in crisis use a voice-based contact list, they can work the application through voice and make the call when required. It permits sending short instant messages between cell phone gadgets. Voice acknowledgment is the fundamental procedure of this application..*
