Abstract: *This Website is used to order food online in universities or colleges. It saves time by pre-ordering your favourite meals, snacks, and drinks from your campus by using this website. In this website students needs to register their personal data and a password and then login to the website and the items that are present in the university canteen will be visible, once you select your items according to your preferences then add them to the cart with quantity you needed. The Registered data will be saved in the database, the website can be created by using HTML, in front end by using CSS language and in backend by using PHP language. Using this website reduces the time in which we use to order food and waiting time to receive food.*

Keywords: HTML, PHP, CSS, Database
