Abstract: *The main goal of this project is Smart Fly which is an airline registration process. This project's main aim is also to reduce the timing process for any details needed in the airline system. This project includes and displays the details of the customer, flight information, payment details, journey details and includes the facility to cancel the reservation made. This project also displays the details of all passengers. Also gives the ability to store the data and retrieve the data from the airline data. It allows the users to add as many as records needed.*

Keywords: Admin, Login, Reservation, Add customer, Add Flight, User, SQL Connection, Flights, Ticket Review, Tickets Cancellation, Xampp Server, IDE, Apache Netbeans
