Abstract: *E-Farming is a stage that helps farmers with advancing their things. This will assist all farmers who with requiring an unequivocal motivator for their plant things, as well as end clients who require a precise rate for each thing. This will assist with the update of their regular daily existence, as well as supporting unfortunate people by giving food to those in a tight spot. Different government-based NGO's work with them to contact those people who have extra food (which they as of late wasted) and can grant consumable food to the NGO to meet their fundamental prerequisites while moreover thwarting food waste. The target of the system/application is to make a neighborhood which all experts are cleared out and the evaluated worth of green things sold directly to farmers. Finally, we use squandered food to clearly accommodate troubled people through a non-benefit affiliation. Therefore, this system can help end-client thing sureness while similarly spreading out a trust association among purchasers and producers. The remainder of the food is given to the persecuted, NGOs, and wastage/extra food is disposed of in various abilities.*

Keywords: Agricultural product, food, NGO
