*Abstract: Cosmetics, also known as makeup or make-up, are care substances used to enhance the appearance or order of the human body. They are generally mixtures of chemical compounds some being derived from natural sources (such as coconut oil) and many being synthetic. In the U.S., the Food and Drug Administration (FDA), which regulates cosmetics, defines cosmetics as "intended to be applied to the human body for cleaning, beautifying, promoting attractiveness, or altering the appearance without affecting the body's structure or functions. This material is intended for use as a component of a cosmetic product. The FDA specifically excludes soap from this category.*

Keywords: Cosmetics.
