**Abstract:** *This research seeks to examine the influence of parental and community engagement on primary education results in emerging nations. Education is a vital element in human development and economic advancement, with early education establishing the groundwork for further learning. Many developing nations have difficulties in delivering effective education owing to constrained resources, inadequate infrastructure, and sociocultural limitations. Engaging parents and communities in the educational process has emerged as a viable way to address these difficulties. This study analyzes current research, delineates several types of parental and community engagement, evaluates their potential advantages, and addresses the obstacles related to the implementation of these efforts. The research highlights the significance of cooperation among schools, parents, and communities to improve primary education results in developing nations.*

**Keywords:** Socioeconomic Factors, Teacher-Parent Collaboration, Learning Environment
