Abstract: *The Autonomous Delivery Robot is designed with ESP32 Camera module to ensure the complete robotic working of the system. This robot is runs on the 4-wheel drive system and can fly over there with the help of long-range remote controller. The system contains a carrier which carry the packages in it that it can be opened by the recipient only. A delivery robot can be used in different settings such as food, package, medical as well as in hospitality industries also.*

Keywords: Camera Module, 4-Wheel, Fly, Remote Controller, Delivery
