Abstract: Lotions are liquid preparations meant for external application without friction. They are applied directly to skin With the help of some absorbent material, such as, cotton wool or gauze soaked in it. The herbal cosmetics are those when natural herbs and their products used for their aromatic value in cosmetic preparation among consumers for herbal products triggered the demand for natural products and natural extracts in cosmetics preparations. Aloe vera is oldest medicinal plant ever known and the most applied medicinal plant worldwide. Several steps used in formulation of lotion such as cutting of tip and base of the leaf, extract mucilage part in mixing jar grind it well, add vitamin E, pasteurized the mixture and cool it after that gel was prepared further take the measured quantity of the gel for lotion formulation mix the measured quantity of ingredient including gel after some time lotion was prepared.

Keywords: Aloe vera, Herbal lotion, Herbal cosmetic, pH, Skin
