Abstract: *This "Systematic knowledge and action, usually of industrial processes but applicable to any repeated activity" is how technology is defined. Technology simultaneously adds to and draws from a body of knowledge in which theory and practical experience are combined to provide tools and procedures for action. interact and compact in practise. Technology can be thought of as a definable, specific means of doing anything at its most basic level. In other words, a technology is a documented, transferable method of problem-solving. Technology has three stages of impact, according to Manfred Kochen. First, technology gives us the ability to do what we already do better, faster, and cheaper; second, it gives us the ability to do things that we are currently unable to do; and third, it alters our way of life. The field of information technology is new to explore.*

Keywords: Pervasive, multitudinous
