Abstract*: The voting system plays a major role during elections. Traditionally, the election commission in India uses electronic voting machines which need more man- power, time- consuming and also they are less trustworthy. For avoiding misconceptions during elections, there are lot of advanced techniques are being proposed using various methods. But in the field of biometric identification, we can get the better results and it is also trustworthy. we provide the various works which are being proposed based on the voting system which uses biometric identification as a major concept.*
