Abstract: *This paper examines the impact of tourism on global warming, focusing on the contribution of the travel and tourism industry to greenhouse gas emissions. The study explores various aspects of tourism that influence carbon footprints, such as transportation, accommodation, and associated activities. It also discusses the indirect impacts of tourism on ecosystems and the environment. The paper emphasizes the importance of sustainable tourism practices in mitigating the environmental impact of the industry.*

Keywords: tourism, global warming, greenhouse gas emissions, carbon footprint, sustainable tourism, transportation, accommodation, ecosystem impact

I. INTRODUCTION

The introduction provides an overview of the topic and highlights the significance of understanding the impact of tourism on global warming. It presents the objectives of the study and outlines the structure of the paper.

II. RESEARCH METHODOLOGY

This section describes the research methodology employed to investigate the impact of tourism on global warming. It outlines the data collection methods, sources of information, and analytical techniques used in the study.

III. LITERATURE REVIEW

The literature review presents a comprehensive analysis of existing research and scholarly work related to the impact of tourism on global warming. It explores studies on tourism-related emissions, carbon footprints, and their environmental consequences. The review also includes discussions on sustainable tourism practices and their potential for reducing the industry's environmental impact.

IV. RESULT & ANALYSIS

This section presents the findings of the study and provides an in-depth analysis of the impact of tourism on global warming. It includes quantitative data on tourism-related greenhouse gas emissions, highlights the major contributors to carbon footprints, and discusses their implications. The analysis also examines the indirect effects of tourism on ecosystems and the environment.

V. CONCLUSION

The conclusion summarizes the key findings of the study and their implications for addressing the impact of tourism on global warming. It emphasizes the importance of adopting sustainable practices in the tourism industry to reduce carbon footprints and mitigate environmental damage. The conclusion also suggests potential avenues for future research in this field.
