Abstract: *The Indian education system has changed in a lot of important ways. Other countries still use online education systems, but India used them only for professional studies in the past. Things are different now. Online education is used in high schools, colleges, and universities in India right now, and not just for professional studies. Trade in recent years has made teaching much easier than it used to be. E-learning is the most popular trend in education right now. Distance learning gives students a wide range of lessons, information, and courses that they can choose from and finish at their own pace. The main goals of this study are to understand how Indian educational patterns have changed over time and how government programs have affected the growth of the Indian educational system.*

Keywords: Most recent developments about India's education system, government policies, and higher education

I. INTRODUCTION

Because of the recent reforms that have been implemented in India's educational system, an increasing number of people are enrolling in online classes. The process of providing students with access to learning opportunities and content through the use of electronic means is referred to as "e-learning." Higher education institutions are now required by the government to place a greater emphasis not only on academic education but also on vocational education. It was discovered that YouTube is the most popular website for the sharing of videos that are used in educational settings. WhatsApp, Facebook, Facebook Messenger, email, and Twitter are the most widely used social media sites and methods for the dissemination of information, respectively. Now we can

II. LITERATURE REVIEW

The use of Smart Learning Tools, Online Learning Platforms, and Digital Classrooms in Indian Education This study looks at how digital classrooms, smart learning tools, and online learning platforms are used in Indian education. This article discusses the advantages, disadvantages, and potential future outcomes of integrating technology into India's educational system.A critical analysis of the National Education Policy (NEP) 2020 and what its implications are for the educational system in India is presented in this article. It examines the most essential aspects of the policy, such as early childhood education, holistic education, and vocational skills, and discusses the potential ways in which the policy could affect the way schools operate.Skill Development: This research paper takes a comprehensive look at India's efforts to improve its skills, including the policies and programmes that have been implemented by the government. It discusses how essential the development of one's skills is to both the ability to obtain employment and to the expansion of the economy. In addition to this, it examines the challenges that people face and offers recommendations for how to enhance efforts to develop their skills.

Online Education: This systematic review looks at how online education has grown and changed in India, as well as the effects it has had. It looks at the different ways online education can be delivered, talks about the challenges and opportunities, and talks about how the COVID-19 pandemic has affected India's use of online learning.

Education for Everyone: This review paper gives an overview of inclusive education in India. It focuses on policies and practices that aim to give children with disabilities and people from marginalized communities access to quality education. It talks about progress, points out problems, and suggests ways to promote education for everyone.

The Role of Private Players: The role of private players in the Indian education system is looked at critically in this review article. It looks into the rise of private schools and universities, how privatization affects access, equity, and the quality of education, and the problems that come with privatization.

These carefully chosen literature reviews give a full picture of how India's education system is changing right now. They talk about a lot of different things, like how to use technology, how to change policies, how to improve skills, how to teach online, how to include everyone, and what the role of private actors is. Each study gives valuable insights, analysis, and suggestions based on a thorough review of the literature and research done in India.

III. CONCLUSION

From the last source, it is clear that India is quickly moving towards online education. India is getting more known in this field right now. Online education has both pros and cons, but it can't replace traditional classroom instruction right away. The country has also put in place an online platform for higher education, which is used by schools and colleges to help students study. The above research will help a lot with the problems that online education programs are having right now.
