Abstract: *The educational system in India has been subjected to numerous changes recently. Although online education systems are still used in other countries, in the past, India was the only country to exclusively use them for professional studies. The circumstances have since evolved. Online education is currently being utilized throughout India's secondary and tertiary education institutions, including high schools, colleges, and universities. The recent expansion of trade has made teaching significantly less difficult in comparison to more conventional methods. E-learning is currently the most widely adopted trend in today's educational system. Students today have access to a vast array of options for lessons, information, and courses that they can choose from and complete at their own pace thanks to advancements in distance learning. The primary objectives of this research are to gain an understanding of the shifts that have occurred over time in the educational patterns of Indian students as well as the role that government initiatives have played in the progression of the Indian educational system.*

Keywords: Emerging tendencies in the educational system, the Indian educational system, new policies from the government, and higher studies

I. INTRODUCTION

Online education that is supported by the Internet is currently the standard of preference in the educational system in India. E-learning, which is also known as online study, is the process of delivering educational content and learning experiences to students through the use of electronic technology. The current educational system in the United States places an equal amount of importance on academic and vocational training programs. In addition, it was found that YouTube is by far the most frequently used resource for academic research conducted online. When it comes to information dissemination on social media, the modes of WhatsApp, Facebook, Facebook Messenger, email, and Twitter are typically utilized. The new forms of educational research have made learning so simple that it can now be done anywhere and at any time using a variety of devices.

devices such as mobile phones, computers, and other electronic devices, among others, etc.

II. LITERATURE REVIEW

RESTRICTIONS OF ONLINE EDUCATION

In India, where people are very traditional in their approach to matters about their ancestry, the customary face-to-face method of learning from the outside is preferred. Students are not provided with adequate facilities, and they do not have access to internet connectivity on a level comparable to that found in other countries. It is difficult to find people in India who are knowledgeable about computers and other forms of technology. Some people believe that the atmosphere in the classroom is critical to the process of motivating and inspiring the pupils. They believe that the classroom is the only place where students can learn useful information. Their intellectual and intellectual learning capacity has increased. According to them, a student is only permitted to voice his opinions and participate in social interaction when they are outside of the classroom. In a traditional classroom setting, students gain an understanding of how rules and rituals are applied in the outside world. These students have the misconception that the presence of a teacher is necessary for learning.

BENEFITS OF ONLINE EDUCATION

Gaining financial advantages is only possible through the use of online education. The cost of traditional education is approximately ten times higher than the cost of online education on average. Students who did not attend their online

lectures can watch them later, anywhere in the world, using a source that is accessible on their mobile phones. It is not necessary to conduct this particular kind of research in any particular location. E-learning, as opposed to more conventional methods of education, opens up more doors for career and personal development. It has been shown in many studies that students who get their education online perform exceptionally well. The delivery of higher education can now take place online, which is beneficial for students of any age. Because these students live in more remote areas where they do not have access to transport facilities, they can make the most of this type of education. As a direct consequence of receiving this kind of education, the pupils' levels of motivation and interest have increased. A student only needs a device and a place to study that is comfortable for them to participate in this form of education. E-learning provides students with access to educational programs that are not provided by conventional educational establishments. Students participating in this form of education have the freedom to divide their time spent studying however they see fit and can pause their coursework whenever they like. This method of learning offers greater adaptability than traditional forms of classroom instruction. It is very easy to get access to education through the Internet. E-learning provides students with many different options, and they are free to choose any one of them. By utilizing online instruction, educators have the opportunity to improve their pedagogical skills. In addition to this, it helps students become better at working together to learn. Students have the opportunity to develop their critical thinking abilities as well as their interpersonal, organizational, personality, and career-building capabilities. This is a valuable opportunity.

THE PURPOSE OF THE EXAMINATION

The purpose of this research is to determine the developments that have taken place in India's educational system, as well as its benefits and how relevant it is in the modern world. In addition to this, the study intends to investigate the reasons why conventional educational practices ought to be replaced by contemporary ones.

III. CONCLUSION

It can be deduced from the previous source that India is rapidly transitioning towards education that is completed online. India is rapidly gaining popularity in this sector at present. Even though there are some benefits and drawbacks to receiving one's education online, it is not possible for it to immediately replace the more traditional method of learning in a classroom setting. An online platform had been established in the past by the country for use in higher education; however, at present, it is also being utilized by school and college educational institutions for their student's academic pursuits. The investigation that is being carried out and that has been described above will prove to be of great assistance in resolving the problems that are currently being encountered by online education programs.
