Abstract: *The educational system in India has changed drastically. Other nations continue to use online education systems, whereas in India, they had previously been utilised for professional studies. Now, the situation has changed. In India, online education is currently utilised not only for professional studies, but also in high schools, colleges, and universities. Recent commerce has rendered teaching significantly simpler than in the past. E-learning is the most prevalent trend in the classroom today. Today's distance education provides students with a vast selection of lessons, information, and courses to choose from and complete at their own pace. The primary goals of this study are to comprehend the evolution of Indian educational patterns and the impact of government initiatives on the improvement of the Indian educational system.*

Keywords: New trends in education, Indian education, government policies higher studies.

I. INTRODUCTION

Internet-based online education is now preferred in India, according to new trends in the educational system. E-learning, also referred to as online study, is the process of delivering learning experiences and instructional content via electronic technology. At schools and colleges, the government is now emphasizing both professional and academic courses. Furthermore, YouTube was discovered to be the most popular online study platform. Typically, WhatsApp, Facebook, Facebook Messenger, email, and Twitter modes are used for sharing information on social media. New educational studies are so simple that we can learn anywhere and at any time by using various devices. Mobile phones, computers, and other devices that can be used for online education

II. LITERATURE REVIEW

LIMITATIONS OF ONLINE EDUCATION

Indians are very traditional when it comes to their ancestors, and as a result, they prefer the traditional face-to-face method of learning from people in the outside world. Online education does not provide this opportunity. Students often complain about a lack of facilities as well as internet connectivity that is on par with the best in the world. When it comes to making use of digital technology, there is a knowledge gap in India regarding computers and other forms of technology. Some people have the opinion that the atmosphere in the classroom is very important in terms of inspiring and motivating the students. They are of the opinion that students can only effectively learn inside of a classroom setting. Their capacities for learning and thinking are significantly improved. They are of the opinion that a student can only socialise and express himself outside of the confines of the classroom setting. Students gain an understanding of how rules and procedures are implemented in the real world through the experience of attending classes in traditional settings. These students have the misconception that a teacher must be present in the classroom at all times.

THE BENEFITS OF OBTAINING ONE'S EDUCATION VIA THE INTERNET

The financial benefits are only available through the use of online education. On average, the cost of a traditional education is ten times higher than the cost of an online education. Students who were unable to attend their online lectures can watch them later using a source that is accessible on their mobile phones, and they can do so from any location. This particular kind of research is not necessary in any particular location. E-learning presents students with more opportunities than the more conventional methods of education. Several studies have shown that students who receive their education online achieve very high levels of competence. Everyone, regardless of age, can benefit from obtaining more advanced education online. These students are able to benefit from this type of education because they

live in more remote areas where they do not have access to transportation. Students experience increased motivation and interest when they receive this kind of education. The only requirements for this type of education are the possession of a device and the creation of an atmosphere that is conducive to learning. Students have the opportunity to learn through e-learning programmes that are not provided by traditional educational institutions. Students participating in this mode of instruction are free to organise their study time however they see fit and to take breaks whenever they like. This approach to education is more malleable than more conventional methods of education. An education can be easily obtained through the use of the internet. Students have access to a wide range of options thanks to the proliferation of online learning. The use of online instruction can assist educators in developing their pedagogical skills. In addition to this, it helps students become better at working together to learn. Students have the opportunity to hone their abilities in areas such as critical thinking, interpersonal communication, organisational skills, personality development, and advancing their careers.

STUDY OBJECTIVE

The purpose of this research is to determine the trends in India's educational system, its benefits, and its current utility. It also seeks to ascertain why traditional educational methods should be replaced with more modern ones.

III. CONCLUSION

According to the previous source, India is rapidly transitioning to online learning. India is gaining popularity in this field. Even though online education has some advantages and disadvantages, it cannot immediately replace traditional classroom instruction. The country has previously introduced an online platform for higher education, but it is now also being used for student studies by school and college educational institutions. The above-mentioned research will be extremely useful in resolving the issues that online education programs are currently facing.
