**Abstract:** *The system of schooling in India has undergone radical revisions in recent years. Online learning is still widely used in other countries, but in India, it was previously reserved for graduate and postgraduate coursework only. The situation has evolved now. Online courses are currently being used for general education as well as professional education in schools across India. Recent trade has simplified education considerably in comparison to conventional education. Today, more people than ever before are taking classes online. Through distance learning, today's students have access to a wide range of courses, lectures, and resources from which to choose. The primary goals of this research are to better comprehend how the Indian educational system has changed over time and how government initiatives have had an impact on that change.*

**Keywords:** Most recent in the educational system, Indian education system, government policies, higher studies

## I. INTRODUCTION

Online education that is based on the Internet is now preferred in India according to new trends in the educational system. The process of delivering learning experiences and instructional content through electronic technology is known as e-learning, also known as online study. Both professional and academic courses are now given equal weight by the government in schools and colleges. It was also discovered that YouTube is the most widely used online study platform. Usually, WhatsApp, Facebook, Facebook Messenger, email, and Twitter modes are used for social media information sharing. We can now easily learn anywhere and anywhere through new educational studies. Mobile phones, computers, and other gadgets can all be used for online learning.

## II. REVIEW OF LITERATURE

### LIMITS OF ONLINE LEARNING:

India is a country where people are very traditional when it comes to their ancestry, so there is a preference for learning from the outside using the customary face-to-face method. Lack of world-class facilities and internet connectivity are problems that students encounter. India has a knowledge gap when it comes to computers and technology as it relates to digital technology. Some people believe that the classroom setting is crucial for inspiring and motivating students. They think that the only setting where students can learn effectively is the classroom. Their capacity for thought and learning is enhanced. They contend that a student can only interact socially and express his opinions outside of the classroom. In a physical classroom, students learn about how rules and procedures are applied in everyday life. These students think that a teacher's physical presence is necessary.

### ADVANTAGES OF ONLINE LEARNING

Gaining financial advantages is only possible with online education. Traditional education is ten times more expensive than the typical cost of online learning. Anywhere in the world, students who missed their online lectures can make up for them later by using a mobile phone source. No one location specifically calls for this kind of study. More opportunities are available through e-learning than through conventional methods. Some studies have found that students who receive their education online are very skilled. Online advanced education is available and beneficial for people of all ages. Because they reside in remote areas without access to transportation resources, these students gain

from this type of education. This type of education has motivated and interested the students. For this kind of education, a student only needs a device and a comfortable space to study in. Through e-learning, students can take courses that are not offered by conventional academic institutions. Students in this type of education have the freedom to divide their study time however they see fit and to pause whenever they like. This method of learning is more adaptable than learning in a traditional classroom. Online education is very easy to access. Students are free to choose from a wide range of e-learning options. Online instruction can help teachers improve their teaching skills. Additionally, it enhances students' capacity for group learning. Students have the chance to develop their interpersonal, organizational, personality, and career-building skills as well as their critical thinking skills.

### PURPOSE OF THE STUDY

The purpose of this study is to identify the trends, benefits, and current utility of India's educational system. It also seeks to establish the justification for abandoning conventional educational practices in favor of more cutting-edge ones.

### III. CONCLUSION

It is clear from the previous source that India is moving quickly towards online education. India is currently gaining recognition in this field. Online education has both benefits and drawbacks, but it cannot immediately take the place of conventional classroom instruction. In addition to being used by schools and colleges for their student's studies, the country has previously introduced an online platform for higher education. The problems that online education programs are currently facing will be greatly helped by the research mentioned above.
