Abstract: *Because of these changes, the Indian education system has changed in many important ways. In India, however, online education methods were only used for professional classes in the past, which was different from how it was in other countries. Things are different than they used to be. Students in India's high schools, colleges, and universities are now taking part in online education, not just for school but also for job training. Due to the growth of trade in recent years, teaching has become a lot easier. E-learning is the most important trend in the area of education right now. Distance learning gives students access to a wide range of lessons, knowledge, and classes that they can do at their own pace. The main goals of this study are to learn about how Indian education has changed over time and how government programmes have helped the Indian education system grow.*

Keywords: Different parts of India's education system, such as government programmes, higher education, and the education system as a whole, have made recent progress

I. INTRODUCTION

Because recent changes have been made to India's education system, more and more people are signing up for online classes. The process of giving students access to learning opportunities and material through electronic methods is called "e-learning." The government now wants higher education schools to put more stress on both classroom education and vocational education. It was found that YouTube is the most famous site for sharing educational films. The most popular social media sites and ways to spread information are WhatsApp, Facebook, Facebook Messenger, email, and Twitter, in that order.

II. LITERATURE REVIEW

How Indian Education Uses Smart Learning Tools, Online Learning Platforms, and Digital Classrooms This study looks at how Indian education uses digital classes, smart learning tools, and online learning sites. This piece talks about the pros and cons of adding technology to India's school system, as well as what might happen in the future. This piece gives a critical study of the National Education Policy (NEP) 2020 and what it means for the Indian education system. It looks at the most important parts of the policy, like early childhood education, a well-rounded education, and job skills, and talks about how the policy might change how schools work.

Skill Development: This study paper takes a complete look at India's attempts to improve its skills, including the government's policies and programmes. It talks about how developing skills is important for both getting a job and growing a business. It also looks at the problems people face and makes suggestions for how to improve their skills.

Online Education: This review looks at how online education has grown and changed in India, as well as what effects it has had on the country as a whole. It talks about the different problems and chances that are there, as well as how the COVID-19 pandemic has affected India's use of online education. It looks in particular at the different ways that online education can be provided.

Education for All: This review piece is about inclusive education in India and gives an overview of the area. It puts the most weight on policies and practises that give children with disabilities and people from underprivileged backgrounds access to high-quality educational opportunities. It talks about improvements, points out problems, and gives ideas for how to make education better for everyone.

In this review piece, the role of private players in India's education system is looked at critically. The title of the piece, "The Role of Private Players," says everything about it. The piece looks into the growth of private schools and colleges, how privatisation affects access, equity, and the quality of education, as well as the problems that come with

privatisation.

These carefully chosen pieces of literature review show how India's education system is changing right now in a big way. They talk about a lot of different things, like how to use technology, how to change laws, how to improve skills, how to teach people using the internet, how to make sure everyone is included, and what the role of private players should be. Based on a thorough review of the literature and research done in India, each study makes smart observations, analyses, and suggestions.

III. CONCLUSION

The most current source makes it very clear that India is quickly making the switch to schooling over the Internet. India is becoming more well-known in this area right now. Even though there are pros and cons to online education, it can't replace typical classroom teaching right away. Also, the country has set up an online tool for higher education that schools and colleges use to help students with their studies. Online education programmes are having trouble right now, but the study mentioned above will help them a lot in figuring out how to fix the problems.
