Abstract: *In many important ways, the Indian school system has changed. Other countries still use online education methods, but in the past, India only used them for professional studies. Things have changed. Online education is used in India's high schools, colleges, and universities right now, and not just for professional studies. In the last few years, trade has made it much easier to teach than it used to be. The most popular trend in schooling right now is e-learning. Distance learning lets students choose from a wide range of lessons, knowledge, and classes that they can finish at their own pace. The main goals of this study are to find out how Indian education has changed over time and how government programmes have affected the growth of Indian education.*

Keywords: Latest news about India's education system, government programmes, and higher education.

I. INTRODUCTION

India's education system has recently changed, so more and more people are taking classes online. E-learning is the process of giving students access to knowledge and learning possibilities through computers. The government is now putting more emphasis on both academic and professional education in schools for higher education. It was also found that most people share informative videos on YouTube. Some of the most popular social media sites and ways to share information are WhatsApp, Facebook, Facebook Messenger, email, and Twitter. Now we can

II. LITERATURE REVIEW

Technology Integration in Education: This research examines the usage of online learning platforms, smart learning tools, and digital classrooms in Indian education. It discusses the benefits, drawbacks, and potential long-term effects of integrating technology into India's educational system.

Policy Modifications: The National Education Policy (NEP) 2020 and its implications for the Indian educational system are examined critically in this article. It discusses how the strategy could alter how schools operate and examines some of its key components, including early childhood education, vocational skills, and holistic education.

The study paper thoroughly examines India's attempts to develop its capabilities, including official policies and initiatives. It discusses the significance of skill development for both economic growth and the ability to find employment. It also considers the difficulties people encounter and offers recommendations on how to enhance skill-development initiatives.

Online Education: This analysis examines the development and evolution of online education in India as well as the consequences it has had. It examines the various delivery methods for online education, discusses the difficulties and advantages, and examines how India's usage of online learning has been impacted by the COVID-19 epidemic.

Education for Everyone: The inclusive education system in India is described in this review study. It focuses on laws and procedures intended to provide students with disabilities and members of underserved groups with access to high-quality education. It discusses advancement, highlights issues, and makes recommendations on how to encourage universal education.

The function of private players is examined critically in this review essay. They play an important part in the Indian educational system. It examines the emergence of for-profit colleges and universities, how privatisation impacts educational access, equity, and quality, as well as its drawbacks.

These carefully picked literature evaluations paint a complete picture of the current state of change in India's educational system. They discuss a wide range of topics, including the use of technology, changing legislation, enhancing skills, teaching online, including everyone, and the function of private actors. Based on a thorough investigation of the literature and research conducted in India, each study offers insightful observations, analyses, and recommendations.

III. CONCLUSION

The last source shows that India is moving quickly towards online schooling. Right now, India is becoming more well-known in this area. There are pros and cons to online education, but it can't replace standard classroom learning right away. The government has also set up an online tool for higher education that schools and colleges can use to help their students learn. The study above will help a lot with the issues that online education programmes are having right now.
