# Awareness of Health Insurance - A Study Based on Customer Perception in Chennai, Chengalpet and Kancheepuram Districts

Prof. Arpita Kothari

Asst. Professor and Research Scholar St. Rock's College of Commerce and Science, Borivali (W), Mumbai, India

Abstract: The overall Insurance Industry contributes about seven percent GDP to our economy. The increased rate of market competition due to liberalization has forced insurers to serve customers better. Leveraging on the demand for quality healthcare and following global practices, the concept of health insurance was introduced by the IRDA. For penetrating Health Insurance among customers Insurance Companies had to follow innovative and emerging trends of distribution. First aim of this study is to identify the relationship between the annual income of the family with the reasons for selecting health insurance policy and premium commitment by the respondents. Secondly, to find the relationship between premium amount and the sum assured. Health insurance has been a game changer and utility for the insurance industry, medical fraternity and the common man making peace of mind affordable. It is concluded from the study that the people are aware of health insurance but they are not inclined to purchase health insurance facilities.

Keywords: Health insurance, Awareness, Customer Perception, Utility

# I. INTRODUCTION

Health Insurance has become an integral part of the Insurance Sector being a money spinner. Demand for modern medical care, brought in by changing lifestyles, growing population, rising in literacy levels, shift in search for quality healthcare and technological advancement are blessings for the Health Insurance Sector. Health Insurance stands for insurance coverage for ill-health or injury, needing hospitalization arising due to lifestyle diseases, accidents, etc.,

# IMPORTANCE OF THE STUDY

Health insurance covers essential health benefits critical to maintaining your health and treating illness and accidents. It protects from unexpected high medical costs being covered innetwork healthcare thereby delivering peace of mind and security. It induces preventive care, like vaccines, screenings, & regular check-ups, closely monitoring our health and in-turn facilitating a healthy lifestyle.

# STATEMENT OF THE PROBLEM

Changing lifestyles, unhealthy eating habits, minimal physical activity, longer and untimely working hours and sleep debt have been responsible for many new age lifestyle diseases and created a demand for quality healthcare. With the cost of healthcare services sky-rocketing, need for health insurance is gaining popularity among the literate. In India, more than 80% of healthcare expenditure is still out of pocket expense. Lack of awareness and foresight has led to lower patronage for health insurance products among the people. There is a need to understand the barriers for not subscribing to health insurance and to study the effect of education level, salary and other factors associated with the non-purchase of health insurance by the public.

# **OBJECTIVES OF THE STUDY**

- To study customers' perception towards Health Insurance.
- To study Health Insurance as a product on offer.

• To Suggest Measures for improving Health Insurance

#### **II. REVIEW OF LITERATURE**

Madan Mohan Dutta(2021) analysed the performance of Health insurance sector in India using Regression analysis and found that with better technological expertise coming in from the foreign partners and involvement by the IRDA, the health insurance sector in India would turn around and start to earn profit.

**Deepali Garge, Snehal Tare, Smarjeet Das (2020)** aimed to evaluate the source, awareness of health insurance in India among 102 respondents from Maharashtra. Sources of awareness of health insurance include employer, the Internet, newspaper, friends, and television. It was found that there is a need to create awareness among people for health insurance. Health insurance investment should not look at contingency, but it must be a regular habit. **Dandekar V M (2019)** investigated the scope for growth of the health insurance market in the Bilaspur region among 200 health insurance agents and found that there were difficulties of customers in deciding to opt for the health insurance plan. Government should encourage companies to propagate health insurance facilities to more and more people and agents should explain the benefits of health

insurance to customers and to target groups.

Vijeta Chaudhary (2019) discussed customer satisfaction and awareness of health insurance among 124 respondents using . Percentage analysis and Chi-square test and found that there was no significant association between age and satisfaction on service provided, qualification and health insurance products purchased by customers.

**TripathyP et al., (2018)** analyzed customer awareness towards health insurance with special reference to Bhubaneswar City with a sample size of 200 consumers. The study concluded that there was no significant association of awareness of health insurance policies of the customers.

AnandalakshmyA and Brindha K (2017) studied the awareness and factors influencing purchase decisions towards health insurance in Coimbatore and found that there was a significant relationship between age and source of awareness among people.

**Arun Vijay and Dr.V. Krishnaveni (2017)** studied the awareness and purchasing patterns of health insurance policy among 150 respondents in Ernakulam District, Kerala. The reasons for purchasing health insurance policies and the trend among awareness and availing health insurance policies between different age groups was analysed. It was found that people were highly aware of health insurance but they were not willing to purchase health insurance facilities.

**Mohan Prakash N R and Nagaraj K V (2016)** studied health insurance and its impact on the operations of hospitals in India. The changing role of occupancy rate in hospitals and the implications of privatization on health insurance in India and whether government fund allocation was utilized for the development of hospital services were analysed.

Choudhary& Maheshkumar L (2013) studied awareness of health insurance and its related issues in rural areas of Jamnagar. Factors such as education, socio-economic status and occupation were the favorable determinants for choosing health insurance.

#### **III. RESEARCH METHODOLOGY**

The present study is analytical in nature. The study was conducted at Chennai,Kancheepuram and Chengalpet districts. Primary data was collected by administering a pre-tested questionnaire. To undertake this study a sample of 210 respondents had been selected by applying convenient sampling technique. Statistical tools namely percentage analysis, Correlation and Regression have been used to analyze the primary data. Secondary data for the study has been collected from various publications in journals, magazines, websites and books.

#### IV. LIMITATIONS OF THE STUDY

The data collection was spread over a period covering several months and it is possible that introduction of new schemes into the market and personal reasons could have caused some changes in the attitude of people towards health insurance coverage. Area of data collection is limited to three districts of Tamilnadu. Hence, findings cannot be interpreted to people belonging to a larger geographical area.

#### Sources: Primary Data

Table 2 shows that 55 percent of the respondents take Health Insurance from Public General Health Insurance companies. Majority (47 percent) of the respondents choose Group Health Insurance policy, 71 percent of the respondents pay less than Rs.12000 p.a as premium and 53 percent of the respondents pay their premium on monthly basis. 43 percent of the respondents know about Health Insurance through ESI (Employees State Insurance).

Relationship between Annual Income of the family and Reasons for selecting Health Insurance

H01: There is no significant correlation between Annual Income and the Reasons for selecting Health Insurance Policy. H11: There issignificant correlation between Annual Income and the Reasons for selecting Health Insurance Policy.

Table 3: Correlation between Annual Income and the reasons for selecting Health Insurance Policy

| Factors  | Annual Income                           | Reasons        |
|--|---|----------------|
| Annual Income                                      | 1                                       |                |
| Reasons  | .241*                                   | 1              |
| Note: * Correlation is s<br>Results computed using | ignificant at the 0.05 lev<br>SPSS 14.0 | el (2-tailed). |

Table 3 shows that there is a significant positive correlation between Annual Income and the reasons for selecting Health Insurance Policy.

#### Impact of Annual Income on Commitment to Pay

H02: There is no significant relationship between Annual Income of the family and the PremiumCommitment. H12: There is significant relationship between Annual Income of the family and the Premium Commitment.

| Sum Assured   | .534        | .099             | .467                    | 5.364          | .000         |         |      |

Table5: Relationship betweenPremium Amount and Sum Assured

a. Predictors: (Constant), Premium Amountb. Dependent Variable: Sum Assured Note: Results obtained by using SPSS 14.0. \*Significant @ 5% level of significance;

Table 5shows that  $R^2$  value is 2.18% and adjusted  $R^2$  value = 2.11 %. It was found that F = 28.767, p = 0.000 were statistically significant @ 5% level. Hence, there is significant relationship between Premium Amount and the Sum Assured.

#### VI. SUGGESTIONS

Increase Awareness of Health Insurance Products and make it easily available to all.

Create Tailor-made simple products to benefit customers

Promote Healthy competition to benefit customers.

Embrace service mentality shedding business orientation.

#### VII. CONCLUSION

Healthcare has become a luxury in today's world. Health Insurance is rapidly moving towards becoming a product from being a concept. It is desirable to treat Health Insurance as an Investment for future unforeseen expenditure. Patronage for Health Insurance is low pertaining to awareness deficiency. Sufficient measures need to be taken to increase the awareness to possess Health Insurance which is capable of delivering peace of mind.
