Dr. Rajendra Gode Institute of Technology and Research, Amravati, India

Abstract: *This work describes how Artificial Intelligence can be used and is being used in Educational sector. According to the 21st International Conference on Artificial Intelligence in Education held in 2020, AIED is one of the currently emerging fields in Educational technologies. The use of AI is still unclear for the educators how to make pedagogical advantage of it on a broader scale and how AI can impact on teaching and learning in higher education. The impact of AI in education and its pros and cons are presented here. It also describes a specific way to develop AI enabled platform for education and finally the after effects of AI in education.*

Keywords: Artificial Intelligence, AIED, emerging, pedagogical

I. INTRODUCTION

According to the 2018 Horizon report, experts anticipate that the use of AI in the education to grow by 43% in the period of 2018 – 2022. Application of AI in education has been a subject of research from the past 30 years. The report made by Research and Markets, in 2019 global AI Education market reached \$1.1 billion and estimated to reach over \$25.7 billion by 2030. The precursors on the application of AI in education is found in the works of the psychologists B. F. Skinner, also known as the father of behaviorism who was a professor at Harvard University from 1948 until his retirement in 1974, and Sidney Pressey who was a professor at Ohio State University in the 1920's.

II. AI IN EDUCATION

The International Artificial Intelligence in Education society (AIED) is an interdisciplinary community at the frontiers of the fields of computer science, education and psychology. The International AIED society was launched on 1st January 1997. It gathers researchers by holding the International Journal of AI in Education (IJAIED) and AIED conference series. In general, there are four areas of AIED in academic support services, and institutional and administrative services such as Profiling and Prediction, Assessment and Evaluation, Adaptive systems, Personalization and intelligent tutoring systems. The field of AI is both innovative and derivative. Artificial Intelligence is an emerging technology that started modifying educational tools and institutions. Education is a field where the presence of teachers is must which is the best educational practice the advent of Artificial Intelligence changes the teacher's job who are irreplaceable in the education system. The AI uses mainly advanced analytics, deep learning and machine learning for monitoring the speed of a particular individual among the others. As the solutions in AI continue to get to higher level it helps to identify the gaps in teaching and learning and increases the proficiency of education. AI can drive efficiency, personalization and streamline admin tasks to allow teachers the time and freedom to provide understanding and adaptability- uniquely human capabilities where machines would struggle. With the combination of machines and teachers it is possible to pull out the best results from students.

Use of chat GPT in high school for students:

Chat GPT can be used to improve students' grammar skills by providing personalized and interactive assistance. Through engaging in chat sessions with the chatbot, students can practice and receive feedback on their grammar usage. This interactive learning experience has been found to significantly improve English grammar skills among college students. The use of Chat GPT as a "pocket tutor" allows students to get quick answers, find explanations for queries, and access resources. By offering realistic case scenarios and personalized feedback, Chat GPT can engage students in active and personalized learning, enhancing their grammar skills. The superior effects of chatbot use in

improving grammar skills have been confirmed in comparison to human interaction. Therefore, Chat GPT has the potential to enhance grammar learning and provide valuable support for students in their language development.

III. IMPACT OF AI IN EDUCATION

Almost AI impacts every area of our life in the future and out of all those Education sector will be impacted hugely because teaching and learning is a major part of life and the current education system has a lot of changes to be desired. The schooling in olden days are not as flexible as what the future AI in education will present. The teachers that play the most important role in education system are not scalable

IV. ADVANTAGES OF AI IN EDUCATION

At present young people tend to use lot of time using their smartphones or tablets. This gives them a chance to study for ten to fifteen minutes in their free time by using AI applications. AI helps us understand the mood or ease of student during the lectures by using Gesture Recognition Technology. Since AI becomes more sophisticated the machine reads the facial expressions or gestures of the student and uses them to know if the student is struggling to understand the lecture and alter the lesson so that the student can follow up easily. The customization of the academic curriculum can be done by AI powered machines. AI tools can make global classrooms possible including people who are visually or hearing impaired. This can also help students who cannot attend classes due to illness. In the normal education system, the teacher grades the students on their homework and tests, which would consume a lot of time. Here when AI steps in it would make a quick work out of these tasks. It also helps in suggesting the ways to overcome the gaps in learning. AI provides with several resources to people who speak different languages or have hearing or visual difficulties. Presentation Translator provides subtitles in real-time mode, which is an AI based system application. For example, with the help of google translator students can read and hear in their national language. For more interactive sessions modern technologies like VR and gamification are helpful. There were already some setups where multiplechoice tests were graded through machines and now developments are being made in the direction where written type answers like paragraphs, statements can be graded using machines. This makes the work of a teacher easier and no time is wasted and this saved time can be used to concentrate more on individual student assessment and their development. Admissions and enrollment processes can also be done with AI in the future and its full potential is yet to be out. AI can help students in their homework or test preparations at home. AI in the near future will be able to respond to a range of learning styles. It's all thanks to Artificial Intelligence that tutoring and studying programs are becoming more advanced.

V. AI BASED SOLUTIONS IN EDUCATION

There are lot of tech driven solutions in the industry of education like Dream Box, Khan Academy, Achieve3000, etc.. There are several educational platforms based on AI technology. · Third Space Learning · Little Dragon · CTI · Brainy · Thinker Math · Carnegie learning The Third Space Learning system was created with the help of scholars from London University College. It helps to recommend the ways to make the teaching techniques better, like giving a warning when the explanation of teacher is either slow or very fast.

VI. DEVELOPING OF AN AI ENABLED PLATFORM FOR EDUCATION

There are six main steps to develop an AI platform for education. · Step 1. Study the existing solutions. · Step 2. Consider the content of the application which should be both interesting as well as interactive. · Step 3. Discuss the requirements of your project with the development team. · Step 4. The application should be thoroughly and properly tested to avoid bugs. · Step 5. Promote the app and get the feedback after its release. · Step 6. Update your app regularly. Initially we must make some analysis on the existing solutions carefully and add new feature to them so that the user gets attracted to your solution instead of the others. Study the design ideas. User's always prefer the useful content so you can choose topics like Medicine, Literature, Math and others. This useful content can also be obtained from tutors of various universities or colleges and from various sources like courses, training programs.

VII. DISADVANTAGES OF AI IN EDUCATION

Despite of the huge opportunities AI offers there might also be some potential risks with it. AI is likely to become either the best or the worst thing that might happen to humanity. AI could support teaching and learning but new ethical implications and risks emerges with the development of AI applications in higher education. One such example is, due to the ongoing corona virus pandemic and the budget cuts, the administrators might think of replacing teaching with profitable automated AI solutions. If the usage of AI in education increases there might be chance that personal interactions get decreased and students get technology addicted and sometimes this may hurt the learners instead of helping them. The faculty members, student counsellors, teaching assistants and administrative staff might get feared that the Intelligent Tutor System which is application of AI might replace them. AI system require a huge amount of data including information of students and staff which is confidential and it heads to serious privacy issues. When compared to the cost of installation, maintenance and repair AI is highly expensive. Only the heavily funded educational organizations can allow themselves to enjoy such high technology. When relied on this technology too much it can cause lack of personal connections and might hurt the users in this perspective. When something like natural disasters or accidents occur and an AI needs repairs we can never know how much amount of data is lost.

VIII. CONCLUSION

AI in education is a revolutionary change. According to a report issued by Centre for Integrative Research in Computer and Learning Sciences states that the next level uses of AI in Education is not yet invented. So the people working on AI applications should let the educators and education policy makers know about this in depth. Although there are several cons of using AI in educational sector, our future is AI
