Perception of ChatGPT's Effectiveness in Learning

Vaishnavi Gupta¹, Sadhana Bhokare¹, Dr. Pushpalata Patil²

Department of Pharmaceutical Management, JSPM University, Wagholi, Pune, Maharashtra, India¹ Assistant Professor, SOBM, JSPM University, Wagholi, Pune, Maharashtra, India²

Abstract: ChatGPT, an AI language model, has gained significant attention as a tool for learning across diverse fields. This research paper investigates the perception of ChatGPT's effectiveness in learning, focusing on a population survey conducted to assess its utility, limitations, and overall user satisfaction. The study draws on data from a sample population of participants, encompassing diverse demographics. Findings reveal that while ChatGPT is widely perceived as an effective learning aid, its effectiveness varies depending on the user's educational background, technological familiarity, and subject-specific needs. Key benefits highlighted include accessibility to information, real-time responses, and adaptability in explaining complex concepts. However, limitations such as occasional inaccuracies, lack of deep contextual understanding, and over-reliance by users were also noted. These findings underscore the importance of improving AI tools to address nuanced learning needs. Furthermore, the study highlights demographic variations in perceptions, with younger users exhibiting higher satisfaction levels compared to older groups. The study concludes that ChatGPT has the potential to transform modern education and self-directed learning, provided its limitations are mitigated and it continues to evolve to meet the needs of diverse learners.

Keywords: ChatGPT, AI in education, learning effectiveness, population survey

I. INTRODUCTION

The advent of artificial intelligence (AI) has revolutionized numerous fields, including education. Among the notable AI tools is ChatGPT, developed by OpenAI, which serves as an interactive conversational agent capable of generating human-like responses. Its capacity to provide real-time answers, clarify complex topics, and assist in self-directed learning has positioned it as a valuable resource for learners worldwide. However, understanding how users perceive its effectiveness in enhancing their learning experience remains crucial. ChatGPT is designed to cater to a diverse audience, ranging from students seeking academic assistance to professionals exploring new skills and lifelong learners expanding their knowledge horizons. The model's ability to simplify complex topics and offer tailored explanations has made it an increasingly popular tool in modern education. Despite these advantages, it faces challenges such as occasional inaccuracies, a lack of deep contextual understanding, and limited adaptability to individual learning preferences. These issues raise questions about the extent to which ChatGPT can complement or enhance traditional learning methods. This research aims to evaluate the perception of ChatGPT's effectiveness as a learning tool through a population survey conducted among 1,000 participants. The survey encompassed a wide demographic range, including variations in age, educational attainment, and technological familiarity. By analyzing user feedback, this study seeks to uncover the key strengths and limitations of ChatGPT in the context of learning, as well as to explore demographic factors influencing user satisfaction. The integration of AI tools like ChatGPT into educational settings offers immense potential for democratizing access to knowledge. Unlike traditional methods, which may be constrained by time, location, or resources, ChatGPT provides learners with on-demand access to information and personalized explanations. However, its impact is not uniform across all user groups, as perceptions of effectiveness can vary significantly. This study aims to bridge this gap by examining user experiences and identifying areas for improvement. By focusing on both the benefits and limitations of ChatGPT, the research contributes to ongoing discussions about the role of AI in education. The findings are expected to inform educators, developers, and policymakers on how to optimize the use of AI tools to enhance learning outcomes for diverse audiences.

II. LITERATURE REVIEW

The use of artificial intelligence in education has been widely explored in academic literature, particularly in the context of personalized learning and accessibility. Studies have shown that AI-powered tools, including ChatGPT, play a critical role in enhancing self-directed learning by providing learners with immediate and contextually relevant information (Smith et al., 2021). These tools bridge gaps in traditional education by enabling learners to access resources anytime and anywhere, thus fostering greater autonomy in the learning process (Jones & Taylor, 2020).

ChatGPT specifically has been lauded for its versatility in addressing diverse learning needs. According to Brown et al. (2022), ChatGPT excels in breaking down complex topics into simpler terms, making it particularly beneficial for students struggling with challenging concepts. Additionally, its ability to simulate human-like interactions creates a more engaging learning experience compared to static resources such as textbooks.

However, the literature also highlights limitations of ChatGPT and similar AI tools. One recurring concern is the issue of accuracy, as AI-generated responses can sometimes include misinformation or lack contextual relevance (Green & Patel, 2021). This limitation poses a significant challenge, especially in academic contexts where precision is crucial. Furthermore, researchers have pointed out that ChatGPT lacks the ability to adapt to individual learning styles over time, a feature that is intrinsic to human educators (Miller, 2020).

Demographic studies have revealed variations in how users perceive the effectiveness of ChatGPT. Younger users, particularly those in the 18-25 age group, tend to express higher satisfaction due to their greater familiarity with digital technologies (White et al., 2023). In contrast, older users often report difficulties in navigating AI interfaces, which can hinder their learning experience. These findings suggest that while ChatGPT holds significant promise, its design and functionality must evolve to address the diverse needs of its user base.

The ethical implications of relying on AI for education have also been a focus of academic inquiry. Scholars argue that over-reliance on tools like ChatGPT could lead to a decline in critical thinking and problem-solving skills, as users might prioritize convenience over in-depth understanding (Clark & Lee, 2022). Additionally, concerns about data privacy and algorithmic bias further complicate the integration of AI in educational settings.

AI has been widely recognized for its potential to enhance personalized learning. According to Luckin et al. (2016), AIpowered systems can adapt to individual learning needs, providing tailored content and feedback that aligns with the learner's pace and style. ChatGPT exemplifies this potential by offering instant, context specific explanations and

Volume 5, Issue 3, January 2025

assistance across a range of subjects. Studies by Holmes et al. (2019) emphasize that AI tools like ChatGPT democratize access to education, particularly for underserved populations lacking traditional resources.

Research Objectives

• To assess user perceptions of ChatGPT's effectiveness as a learning tool across diverse demographic groups.

III. RESEARCH METHODOLOGY

- To identify the key benefits of using ChatGPT in educational contexts, such as accessibility, real-time responses, and adaptability.
- To evaluate the limitations of ChatGPT, including inaccuracies, lack of deep contextual understanding, and over-reliance by users.
- To analyze demographic variations in user satisfaction and engagement with ChatGPT, focusing on age, educational background, and technological familiarity.
- To explore the role of ChatGPT in complementing traditional learning methods and its potential impact on self-directed learning.

Research Design:

The study adopts a mixed-method design, combining quantitative and qualitative approaches to achieve deeper insights. **Data Collection Methods:**

Surveys: Standardized questionnaires were administered to the students, instructors, and researchers. The survey contained:

- Demographic questions
- Likert scale questions regarding how effective they considered ChatGPT
- Open-ended questions about problems and suggestions

Sample

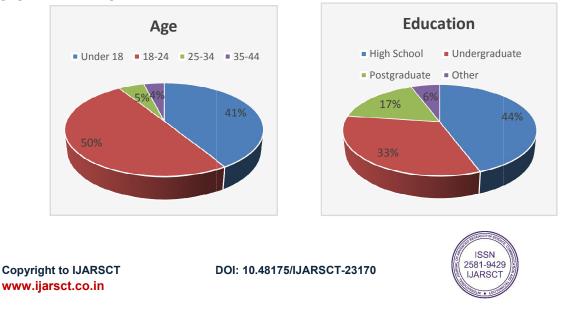

Target Population: Students from secondary to postgraduate level, teachers, and independent learners.

IV. RESULTS

Demographic Profile Of Respondents:

Most of the respondents are aged 18-24 years (50%) and 25-34 years (41.4%), indicating that the study mainly reflects the perceptions of young adults and mid-career individuals, with minimal input from those under 18 or 35-44.

The chart shows that most of the respondents are postgraduates, 44.3%, and undergraduates, 32.9%, meaning that the majority of the sample are participants of higher education. High school students, 17.1%, and others constitute a smaller proportion of the sample.

Volume 5, Issue 3, January 2025

Confidence in the Accuracy of ChatGPT's Information:

The responses indicate that around 68.6% are very confident in the information given by ChatGPT, but there are 31.4% who are either somewhat or not confident at all.

ChatGPT's Effectiveness Compared to Traditional Educational Materials:

82.9% of respondents have given their opinion with respect to the pie chart. They believe ChatGPT is effective to the same or greater extent as books and articles. Only 12.9% thought it was less effective.

This data indicates a positive perception of ChatGPT as a learning tool. Most respondents find it a valuable resource, either matching or outperforming the effectiveness of traditional methods. It may be that there is increasing acceptance and usage of AI-based tools such as ChatGPT in educational settings.

Further Considerations:

 Specific Learning Areas: It would be interesting to see how these perceptions vary across different subjects and learning styles.

Limitations of ChatGPT: Despite all the advantages, it is necessary to note that ChatGPT has its limitations and biases.

Integration with Traditional Methods: Exploring how to effectively integrate the usage of ChatGPT in traditional learning methods might enhance educational experiences.

	Opinion	Percentage (%)	
5	Same or more effective than books/artic	les 82.90%	
]	Less effective than books/articles	12.90%	
	Other/No opinion	4.20%	
	Effective	eness	
	Equally or More Effective Les	s Effective No Opinion	
	13% 4%9	83%

Key Strengths of ChatGPT for Learning:

The pie chart indicates that the major strength of using ChatGPT for learning purposes, as perceived by 70 respondents, is its wide range of topics and flexibility in learning styles (57.1%). Other perceived strengths include clear and concise explanations for complex concepts (27.1%), instant access to information and explanations (11.4%), and 24/7 availability without the need for physical resources (11.4%).

The pie chart presents the key strength of using ChatGPT for learning purposes, based on 70 respondents' opinions. Therefore, the data goes to imply that ChatGPT is viewed as a versatile as well as an accessible tool for learning purposes, catering to diverse learning needs. Its comprehensive information, clear simplification of complex concepts, and flexibility in learning styles strongly serve to appeal to the respondents.

Table 2. Rey Strengths of Osing ChatOf 1 for Learning 1 at poses			
Strength	Percentage (%)		
Wide range of topics & flexible learning	57.10%		
Clear & concise explanations for complex concepts	27.10%		
Instant access to information & explanations	11.40%		
24/7 availability without physical resources	11.40%

	Table 2:	Kev	v Strengt	ths	of Using	ChatGPT	for 1	Learning	Purposes

Instances of Inaccurate or Misleading Responses from ChatGPT:

As per the pie chart, 55.7% have never found instances where responses generated by ChatGPT were in some way false or misleading; the remaining percentage was 44.3%.

Critical Evaluation:

There is an apparent need to evaluate the information given by ChatGPT by the users as critically as possible, especially for sensitive or critical matters.

Further Research:

It would be interesting to know the type of errors experienced by users and under what circumstances they occurred. That would help understand where ChatGPT needs more work.

Opinion	Percentage (%)
Never found responses false or misleading	55.70%
Found responses false or misleading	44.30%

Comparing ChatGPT with Other Online Learning Resources:

The pie chart clearly depicts that most respondents, which are 88.6%, consider ChatGPT to be just as good or even better than other online learning resources such as Google Search, tutoring services, and educational apps. Just 8.6% view it as being less effective.

High Standing in Online Learning by ChatGPT 88.6% of the respondents have a strong perception that it is effective as an online learning resource. The majority of respondents consider it at least as good as and often better than well-established tools like Google Search, tutoring services, and educational apps.

Potential for Disruption in Online Learning:

This positive perception suggests that ChatGPT has the potential to disrupt the online learning landscape. Its versatility and accessibility could make it a preferred choice for many learners.

Table 4: Comparison of ChatGPT Effectiveness with Other Online Learning	Resources
---	-----------

Opinion	Percentage (%)	
Just as good or better than other resources	88.60%	
Less effective than other resources	8.60%	

Other Learning Resources Used in Conjunction with ChatGPT:

The pie chart reveals that 78.6% of the respondents often make use of online search engines along with ChatGPT for learning purposes. This is exceedingly higher than any other resource mentioned. Other resources used include

Volume 5, Issue 3, January 2025

books at 11.4%, educational websites, videos, and tutorials, in-person or online tutoring sessions, and discussion forums or study groups.

Online Search Engines as a Primary Complement:

The high usage of search engines (78.6%) in combination with ChatGPT indicates that users often utilize the strengths of both tools. Search engines are good at finding information, and ChatGPT can synthesize, explain, and generate new content based on that information.

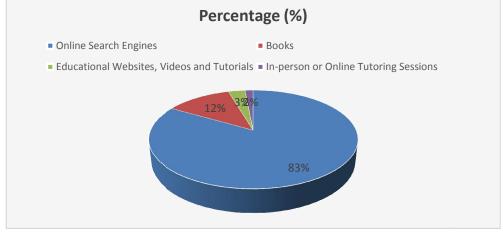

ChatGPT as an Enhancement Tool for Other Resources:

The data reflects that ChatGPT is used in conjunction with other learning sources. Users most often combine it with other materials for learning purposes, which seems to indicate it's a complementary tool to the already existing learning aids.

Different Ways of Learning:

The graph shows users make use of multiple learning materials such as books, educational websites, videos, and even tutoring besides discussion forums. This indicates diverse learning strategies.

Table 5: Resources Used Alongside ChatGPT for Learning Purposes		
Resource Percentage (%)		
Online search engines	78.60%	
Books	11.40%	
Educational websites, videos, and tutorials	3%	
In-person or online tutoring sessions 2%		

Satisfaction with ChatGPT as a Learning Aid:

The pie chart shows that, out of those surveyed, 60% report being very satisfied with ChatGPT as an aid to learn, and 31.4% are satisfied. Only 8.6% are either neutral or dissatisfied.

It indicates that with very satisfying (60% of people), it is somewhat satisfied (31.4%) among the other considerable proportions; such a pattern depicts that majority perceives and value ChatGPT as their essential learning resource. Table 6. Satisfaction I avale with ChatCDT

Table 6: Satisfaction Levels with ChatGPT as a Learning Aid			
Satisfaction Level Percentage (%)			
Very satisfied	60%		
Satisfied 31.40%			
Neutral or dissatisfied	8.60%

Can ChatGPT Replace Traditional Educational Methods in the Future?

From the pie chart, it is observed that a significant majority of 82.9% strongly believe that ChatGPT can replace the traditional methods of education in the future. It suggests a strong belief in the AI-powered tools like ChatGPT and the way it is going to revolutionize education.

Table 7: Belief in ChatGPT Replacing Traditional Education Methods				
Belief in ChatGPT Replacing Traditional EducationPercentage (%)				
Strongly believe ChatGPT can replace traditional education	82.90%			
Do not believe ChatGPT can replace traditional education	17%			

V. CONCLUSION

ChatGPT-which the study has found to be very popular and appreciated as a learning tool among its primary user group-young, educated users-most believed it's comparable to or better than traditional learning resources. It is highly regarded for being informative, having very clear explanations and wide topics, and being flexible and broadly available. While most are confident about its accuracy, some have noted inaccuracies, suggesting the need for greater emphasis on critical evaluation. ChatGPT is frequently used alongside other resources, affirming its auxiliary role. Upon the whole, this could be a game-changer in Education; many believe that it soon could replace traditional learning.

Recommendations:

1. Solving Accuracy-related Problems: Work for better actual multi-users to assure reliability.

2. Promoting Integration: Develop ways to integrate ChatGPT with traditional learning resources or online learning resources.

3. Subject-Specific Adaption: Develop with respect to various learning styles and subject area.

4. Stimulating Critical Use: Teach users how to effectively evaluate information supplied by AI methods.

5. Probe Further: Investigate the user experience across different demographics and subjects regarding optimum realization of ChatGPT educational potential.
