Abstract: In today's world of business to endorse a person's or a companies product there are many ways to endorse it. In this project it help local businesses to endorse their product or brand by endorsing it on its accessory products. In online smart studio a business owner or a social media influencer gets help to endorse their businesses by making accessories of their product logos and goods so that they can better interact with customers and increase their cells. It is very helpful for the businesses as it can be access globally it is very user friendly and can be used in many business cells and it does this all things in the online mode so that it is easily available and convenient for businesses and local vendors.

Keywords: Smart studio

I. INTRODUCTION

The Online Smart Studio enables vendors and to set up online studio setup, where a customer can browse through the studio and a system administrator to maintain the set up.

The main agenda of the smart studio is to set up a portal where the customer can customize printing of photos on T-Shirts, Mugs, Albums, Photo Calendar, etc. online.

Our Smart Studio will use the internet as the sole method for selling goods to its consumers. This project developed using PHP and all the record stores in MySQL database.

IN Smart studio where a customer can browse through the studio and a system administrator to maintain the set up. The main GOAL of the smart studio is to set up a portal where the customer can customize printing of photos on T-Shirts, Mugs, Albums, Photo Calendar, online.

The system will be super convenient and flexibile to use.it will save time effort and money

II. LITERATURE SURVEY

Customized clothing manufacturing is a clothing manufacturing method is performed in collaboration between the manufacturer and the customer. In this manufacturing process, we will offer a basic cloth to the customer (fabric, model, color, style, accessories, printing on clothing, etc.) so that the customer can modify the clothes or design in their own way. the customer can purchase the most appropriate personalized clothing while, at the same time, the manufacturer achieves a high profit margin by making a customized product

Customized clothing production is an important method in the industry because it increases both the profit margin of the enterprises and the level of customer satisfaction. Basically we are going to provide a platform where customer can manufacture their product with customization. Rating aggregation algorithms for individual reputation scores include simple good feedback or good rating the system will be super convenient and flexibile to use.it will save time effort and money

III. CONCLUSION AND FUTURE SCOPE
