Abstract: *In life whatever we saw or whatever we do or whatever the knowledge we applied in any field mathematics lies behind that field. From every day sunrise to the sleep in the bed. Analysis and Algebra holds most part of our life in the name of theorems.*

Keywords: Mathematics, Analysis, Algebra, Life

I. ANALYSIS

"A subset of a countable set is countable" .A group of boys studying in the ABC college first year is countable and a subset group of boys studying in the ABC college first year who lives in city is also countable.

"Taylor series $a^k \cdot x^n$ converges to radius of convergence 1, The series a^k converges to 1".

All boys in the area go to cinema ,boys in the particular street also go to cinema.

"If The function is differentiable then it is continuous"

In time of Elections Candidate distribute 500rs to each house for voting the function is differentiable so they continuously gave money for voting.

Like this there are many theorems in analysis which build our lives around us we are unaware of that.

II. ALGEBRA

A Set G with binary operation satisfy closure, associative, identity and inverse axioms called as group.

If we are in a gang of friends we are closure with the activities, every friend is associative with other and in each gang there is a person identity to that person and also totally opposite to that person also exists

Like this many definitions which build human bondings are also related with mathematics and it has its answer to develop relationships in the form of definitions in groups and rings.

III. LIFE

Life is a mystery but that mystery has its full of answers in mathematics .Some may be in the form of axioms ,some may be in the form of laws, some may be in the form of solving methods ,some may be in the form of step by step procedure, some may be in the form of theorems, some may be in the form of problems, some may be identified as unsolvable like Hamiltonian bridge problem. Mathematics itself is a life and life itself is mathematics and has its all answers in mathematics .

IV. CONCLUSION

Whenever you felt like unsolvable or confused in life just recall the mathematics you learned and you will capture the answer in the form of axioms or theorems or definition but for sure you will caught and you will able to decode it .Life is nothing but just mathematics .
