Abstract: *The internet is going crazy over Chat GPT, an artificial intelligence-based chatbot that research group Open AI published on November 30,2022.The arrival of Chat GPT is changing the internet world. It was a wonderful demonstration of the intelligence that went into gathering and analyzing the data. In just a few days, it shattered all records and reached 10 lakh users. To accomplish the same feat, it took years for Twitter, Netflix and Facebook. All industries, including education, health, law, finance, and customer service, are increasingly using this chatbot. About 50% of American businesses have started using Chat GPT, according to a recent poll. Also, it was discovered that half of the businesses are using chat bots in place of employees. The entire world is eager to see how this new technology will impact people's lives.*

Keywords: Chat GPT

I. INTRODUCTION

The internet is going crazy over Chat GPT, an artificial intelligence-based chatbot that research group Open AI published on November 30,2022.The arrival of Chat GPT is changing the internet world. It was a wonderful demonstration of the intelligence that went into gathering and analyzing the data. In just a few days, it shattered all records and reached 10 lakh users. To accomplish the same feat, it took years for Twitter, Netflix and Facebook. All industries, including education, health, law, finance, and customer service, are increasingly using this chatbot. About 50% of American businesses have started using Chat GPT, according to a recent poll.Also, it was discovered that half of the businesses are using chat bots in place of employees.The entire world is eager to see how this new technology will impact people's lives.

The fact that anyone may quickly get started with OpenAI's website is one of the primary factors contributing to Chat GPT's rapid growth. You can start a chat by going to the website chat.openai.com and signing up with your email address or phone number. In a way that only people have been able to do up until now, if you put queries or statements in the chat box on the website, you will receive clear, accurate, and logical next actions. It will be able to comprehend inputs of images and videos and produce a text-based answer

The last few days have seen both positive and negative coverage on Chat GPT. The GPT chat room is also useful for unwinding. You can ask it to tell you a joke or to give you dating advise. Just be careful not to overthink it. Because to the fact that students all over the world utilise chat GPT to complete their homework and write articles, it has been banned on several college campuses since it launched. To identify plagiarism utilising chat GPT, a number of internet tools have been made available, including GPT Zero, created by Princeton University student Edward Tian.The GPT (Generative Pre-3 Trained Transformer) family of artificial intelligence was created by OpenAI in San Francisco, and the newest member is Chat GPT. Programs that use generative AI create articles, photos, or videos based on spoken input from users. The GPT-3 model, which Chat GPT only has access to through the OpenAI Chat GPT page, is used.

Potential Applications of Chat GPT

ChatGPT has the ability to bring about major improvements in a variety of areas, such as increased productivity, lower costs, and a more tailored and useful customer experience.

- Preparing articles for the media
- Document, programme, and case preparation through technology
- Help for customers: Speaking with them in a human manner

- Personal Assistant
- Examining reports and symptoms to make a diagnosis treatment assistance
- Writing articles, providing guidance for personal studies, and answering questions

The chatbot's responses may contain errors and blunders that appear to be correct, according to OpenAI. Although the open architecture of Chat GPT makes for incredibly smooth, enjoyable, and natural communication, it can occasionally cause the bot to become overconfident and uneasy. It's possible to offer wholly fictitious things (people, places, books, etc.) as fact. The training data dates back more than a year. Bias in the training data and occasionally in the bot's reaction is a major issue. Artificial intelligence that is on par with human intelligence is thought to take some time to develop.

II. CONCLUSION

Many ethical problems are brought up by chat GPT's quick expansion. It is concerning that governments and politicians around the world are unaware of the policy changes when there are so many job losses, including in the IT industry, when chat bots serve as launch pads for cyber attacks, when data privacy poses a problem for those who interact closely with the bots, and when so many jobs are lost. It gives many businesses new life after decades of failing to outperform in the search industry. Several people's ad systems are suffering as more search is moving to chat bots and other apps. The market has been rocked by Chat GPT's boom. It will be a hard battle in the days to come.
